DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

A new prior art reference has been found that is believed to have anticipated the claimed invention, as set forth below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Pregont et al (US 5,351,245).

Claims 1 and 4.

Pregont et al discloses a communication apparatus and method (see Fig.1) comprising;

means for determining the number of radio frames on a physical channel based on the transmission rate of the physical channel, where the radio frame constitute a unit by which a logical channel is carried out, see Fig 2 and col. 2, line 56- col.3, line 59 describing RCH (i.e., a logical channel) is given four frames at the full transmission rate of the physical channel and two frame at the half transmission rate,

means for mapping the logical channel into the physical channel (115) and

Art Unit: 2634

means for transmitting a signal of the logical channel over the physical channel
(109).

Claims 2,3,5 and 6.

Pregont et al discloses generating the signal of the logical channel by adding an error correcting code, specifically CRC, on a unit by unit basis. See Fig.3A illustrating CRC coding.
